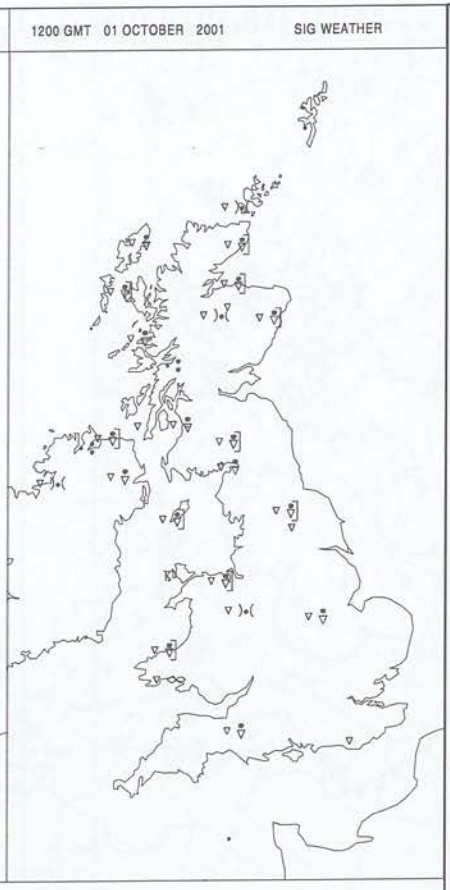
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 01 October 2001.

It was a windy night and there was rain across the county at first, heavy in places, particularly across the north. During the early hours the rain cleared quickly northeast, with clearer, showery weather following in behind. By dawn the rain had clearer all but Shetland but there were plenty of showers packing in across western parts of the country, particularly northwest Scotland, feeding in on strong to gale force winds.

Through the day western parts of the country bore the brunt of the showers, particularly Northern Ireland and western Scotland, with the showers heavy and prolonged. In the east the showers were scattered with more in the way of sunshine but some isolated heavy and thundery showers filtered across form the west.

Through the evening the showers continued to feed across Scotland and Northern Ireland, but across England and Wales they became more isolated and largely confined to the west. However later in the evening a more organised area of rain reached the far southwest.

It was generally a rather warm day across the country and locally warm in places.

EXTREMES

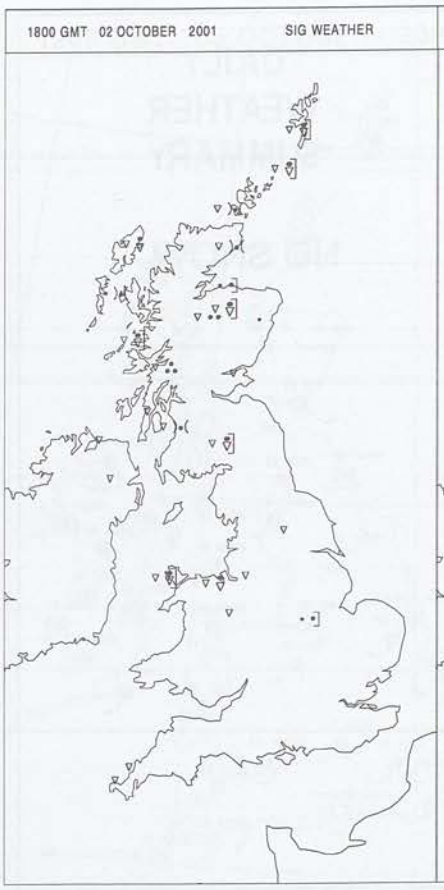
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 02 October 2001.

Scattered showers greeted the start of Tuesday around western and northern coasts with strong southwesterly winds and with many gusts of 50 to 55 knots in the Outer Hebrides and 60 knots reported at Barra. Outbreaks of rain became persistent across southern parts of England during the early hours and turned increasingly heavy and extended into East Anglia by dawn.

Around dawn it was turning drier across Cornwall, whilst still across western Scotland and Northern Ireland there were further blustery showers. As the morning wore on gales developed through the eastern English Channel with a few gusts just over 50 knots near Dover late morning. There were also some heavy pulses of rain across the southeast with 30mm of rain falling in 4 hours near Worthing and in one hour Shoreham airport received 14.2mm.

By afternoon the bulk of the rain had cleared from all but the extreme east of southern England, whilst at the same time scattered showers developed across some western and central parts which had hitherto been dry.

Temperatures were mostly rather warm, although some areas in west Scotland were near normal.

EXTREMES

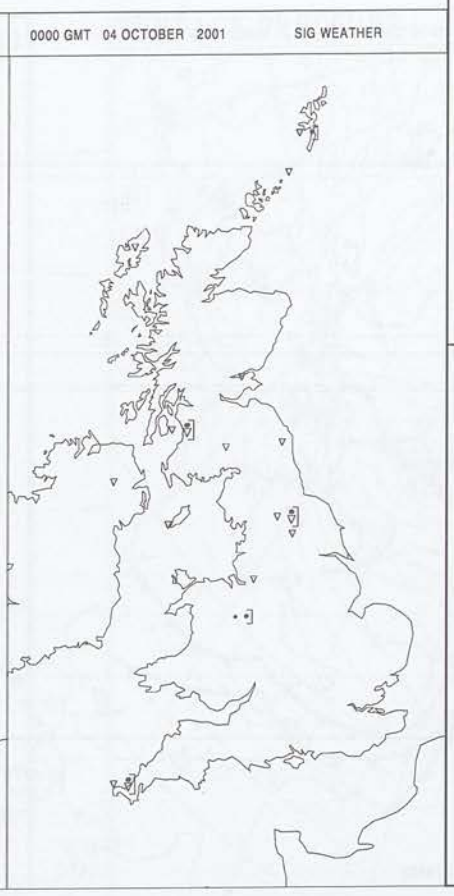
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 03 October 2001.

Northern Scotland started Wednesday with scattered showers, blustery in the strong to near gale westerly winds. There was a band of showery rain further south across the Scottish borders and Northern Ireland, whilst most other parts were dry, save for a line of showers through the Bristol Channel.

By mid morning the showers which had lain across the Scottish borders in the early hours had sunk south into northwest England and parts of west Wales. Elsewhere showers continued further to the north and west but most other parts were dry and bright with some sunshine.

In the afternoon a band of sharp showers developed from Salisbury plain towards the London area and also another close to the Wash, with most other parts of England and Wales having a scattering on mainly light showers. There were, however, some heavy showers in central and western parts of Scotland, northwest England, North Wales and Northern Ireland in the evening.

Temperatures across the vast majority of the country were above the early October average with many places rather warm and a few sheltered spots warm.

EXTREMES

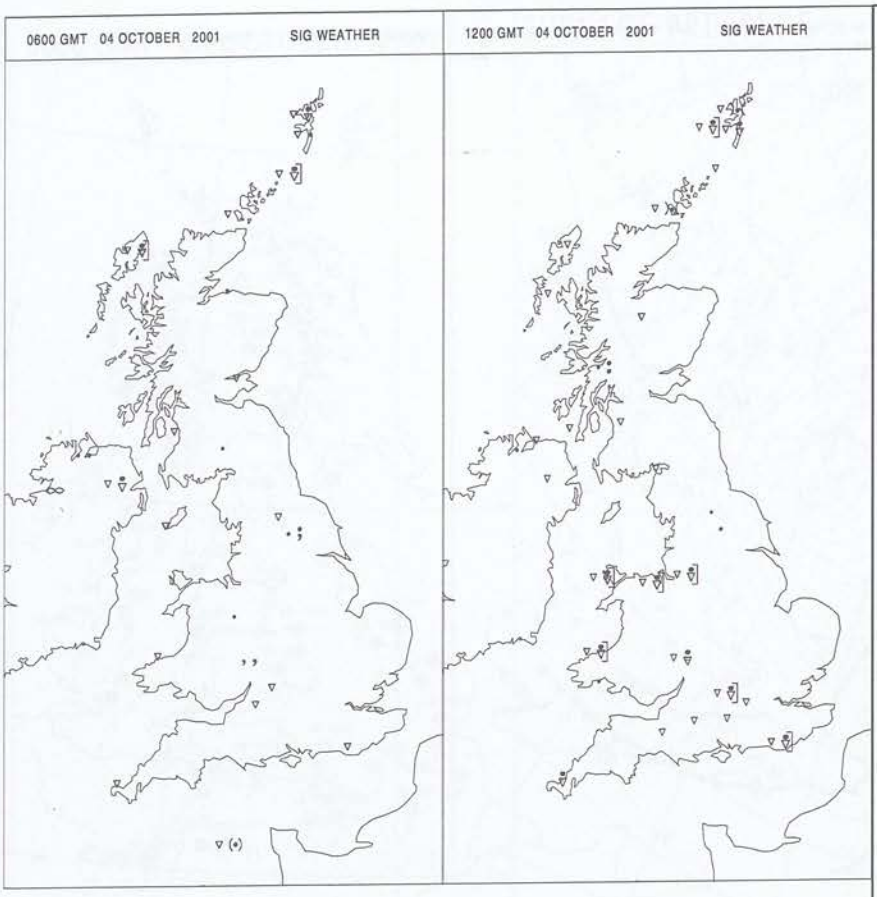
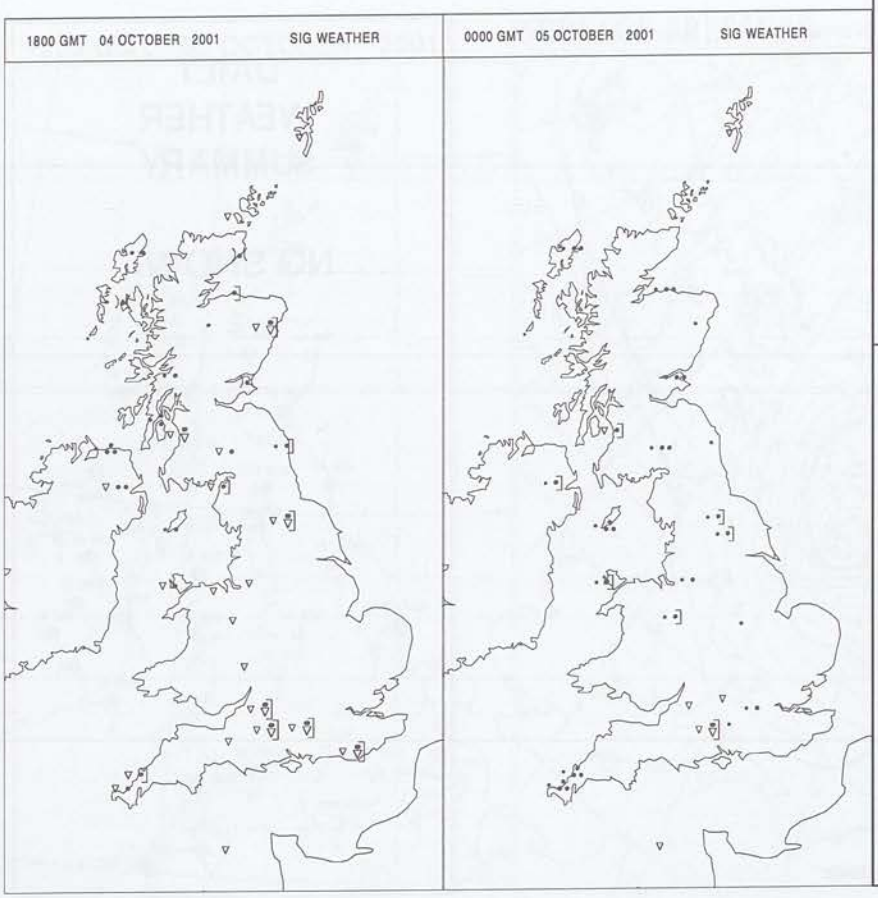
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 04 October 2001.

There were some showers across Scotland overnight mainly in the Western and Northern Isles and across the southwest at first. Northern Ireland had scattered showers and then more general cloud and some rain later. There was a scattering of showers over England and Wales, chiefly in the north.

Showers continued over the northeast of Scotland in the morning. Cloud then increased across the south and west bringing some rain in the afternoon and evening, this rain transferring northeast later, with another band of rain spreading into the west in the evening. Northern Ireland had a mostly cloudy day and an area of rain crossed the Province in the afternoon and evening.

Northern England and north Wales had some rain or showers but also some sunshine. There were a few showers along the English Channel coast and over the southwest, with the best of the sunshine across eastern counties and the Channel Islands. Showery rain spread into many western areas of England and Wales in the evening.

It was mostly rather warm.

EXTREMES

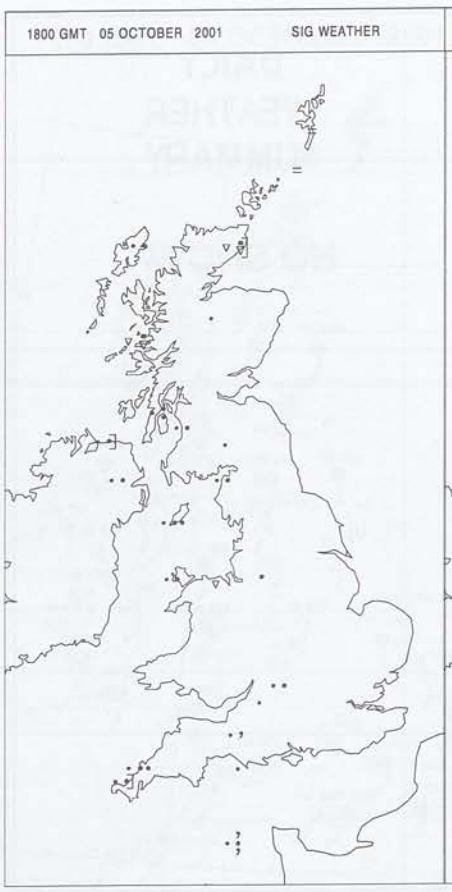
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 05 October 2001.

There were showers during the early hours of the morning in many areas especially the western side of the United Kingdom where some heavy and prolonged.

Although there was still some rain across central England after dawn, this cleared during the morning and most of England was then dry with some sunny spells. The south and east had the best of the sunshine. Further outbreaks of heavy rain reached Cornwall by the end of the morning though and these spread to west Wales and the rest of the West Country in the afternoon. Scotland was generally more cloudy although there was some sunshine in the east. There were outbreaks of rain in southwest Scotland at first and in extreme western areas throughout the day. In Northern Ireland it was cloudy with outbreaks of rain throughout the day in most areas.

During the evening the outbreaks of rain in western areas of the UK moved slowly further east across the country. There was some heavy rain in places, especially over hills.

It was a warm day.

EXTREMES

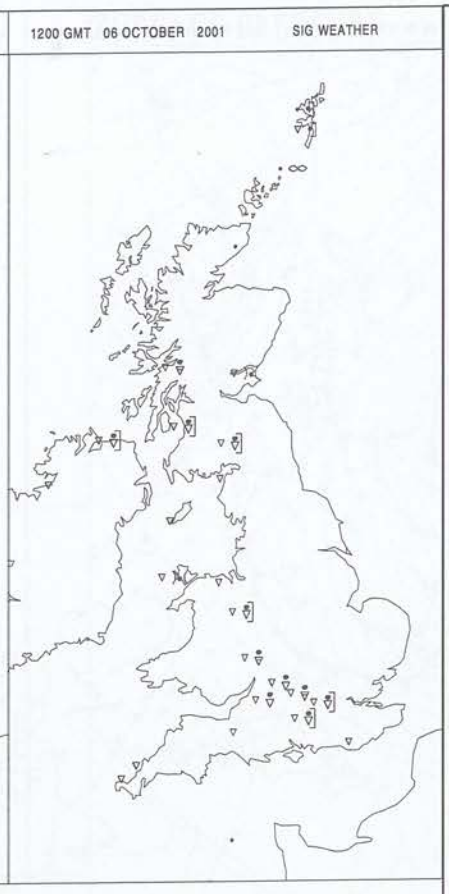
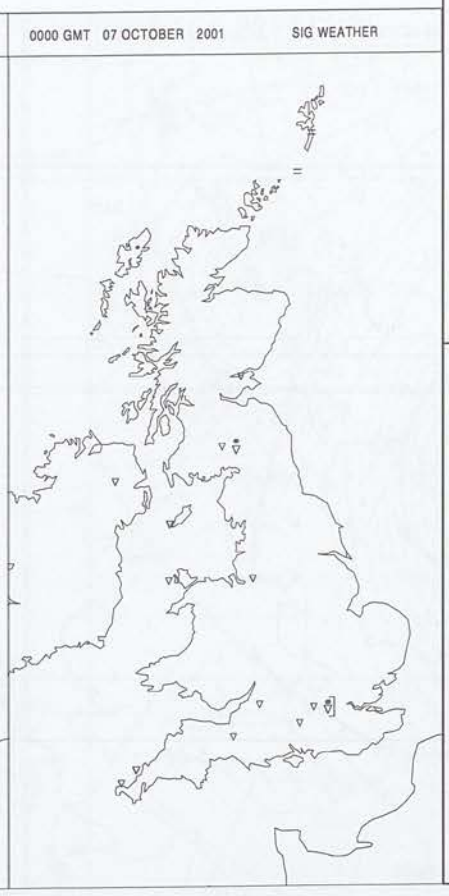
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 06 October 2001.

The night started cloudy with showery, and at times heavy, rain across many parts of Scotland and northern England, extending south into parts of East Anglia and the southeast of England. As the night progressed the rain pushed away northeastwards to only affect the far northeast of Scotland by morning. At the same time showers were starting to affect some southern and western coasts of the UK.

The day was then a showery one with the coastal showers of early in the day soon developing and spreading inland. Some of the showers were heavy and thundery with a tornado reported in Norfolk during the afternoon. Some areas escaped the showers and remained dry with some long sunny spells, including much of the northeast of England.

It was a rather blustery day generally with fresh to strong winds, south to southwesterly over England and Wales, southeasterly in Scotland and Northern Ireland.

Temperatures were between near normal and rather warm values in most areas.

EXTREMES

Highest Maximum:
19.1 Coningsby, Lincolnshire

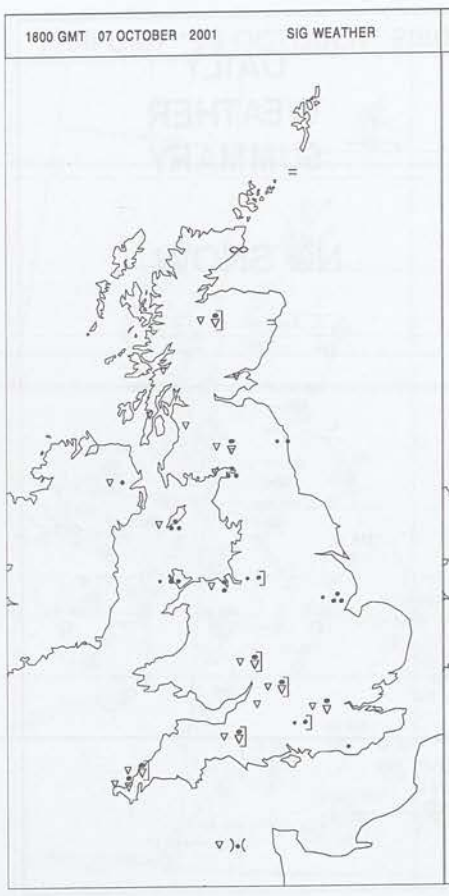
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 07 October 2001.

Many places had a dry night with variable cloud. There were some showers over Scotland and widespread showers across southern counties of England, some thundery.

Northern Ireland, after a bright morning, had a few showers in the afternoon and then rain in many parts in the evening. Showers continued over southern Scotland and steady rain spread into southern parts by evening.

Showers continued over southern England in the morning becoming less frequent as cloud thickened later. Rain spread into southwest England in the late morning with an increasing wind, and this rain pushed across England and Wales in the afternoon and evening. The heaviest falls were mostly in southern counties, and at Swanage 40 mm of rain fell in around an hour. Squally showers followed the rain to all but Wales, where persistent rain lingered across southern and central parts. Mumbles reported a gust of 67 knots at 1900 and many places along the Channel coast had over 50 knots. At Needles an isolated gust of 71 knots occurred at 2200.

Temperatures were close to average generally. It was warm over northern Scotland.

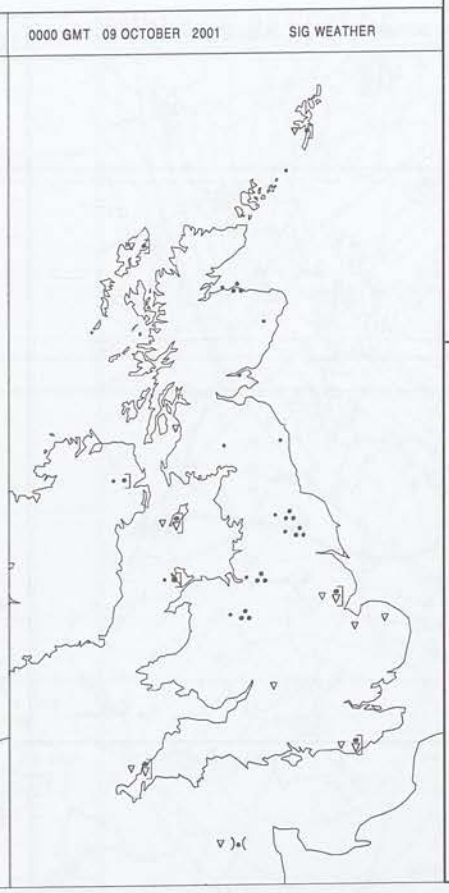
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 08 October 2001.

Rain across parts of Northern Ireland overnight cleared to leave some showers. Rain over the south and east of Scotland spread north to most other parts. Showers continued over southern counties of England, with thunder and very heavy rain reported in places, and there was some more general rain over south Wales. Elsewhere it was mostly dry.

Northern Ireland was wet for much of the day but the rain turned more showery later. Bands of rain circulating the low centre across Scotland affected mainly northern and eastern parts. This rain became confined to the northeast in the evening, with scattered showers elsewhere.

Showers already over southern counties became more widespread over the southern half England through the day, with more scattered showers elsewhere across England and Wales. An area of more general rain spread down from Cumbria into northern England in the evening, and later north Wales. It was a less windy day generally but the highest gust recorded 55 knots at Fair Isle at 0700.

Temperatures were mostly close to average.

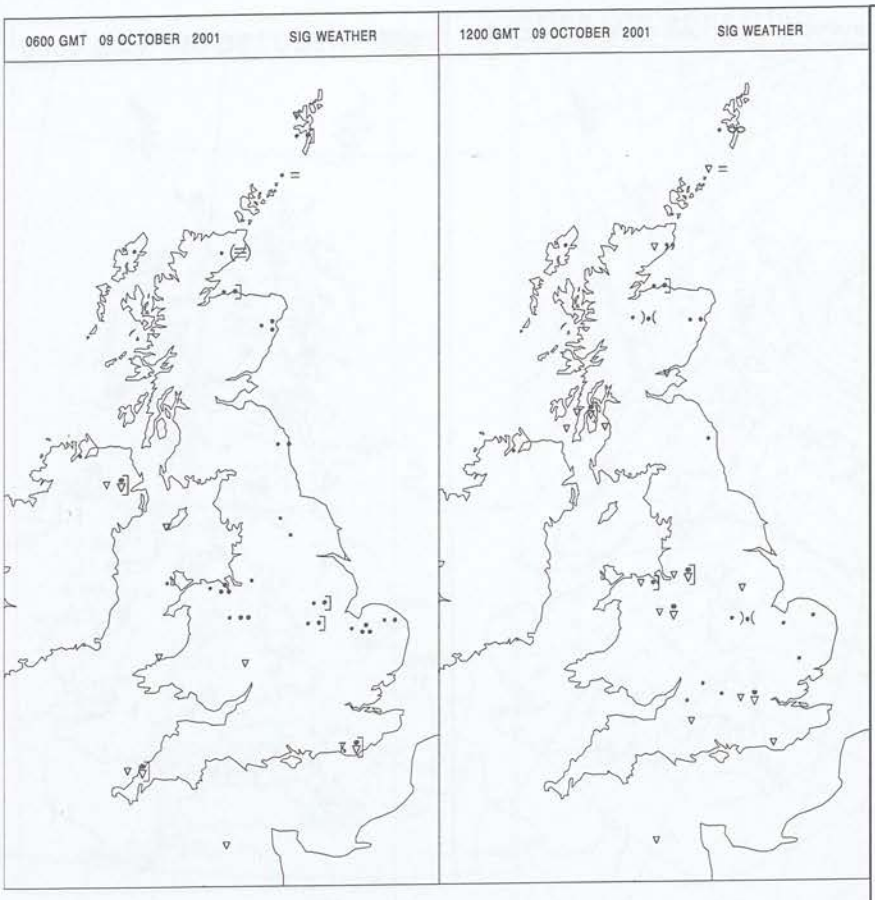
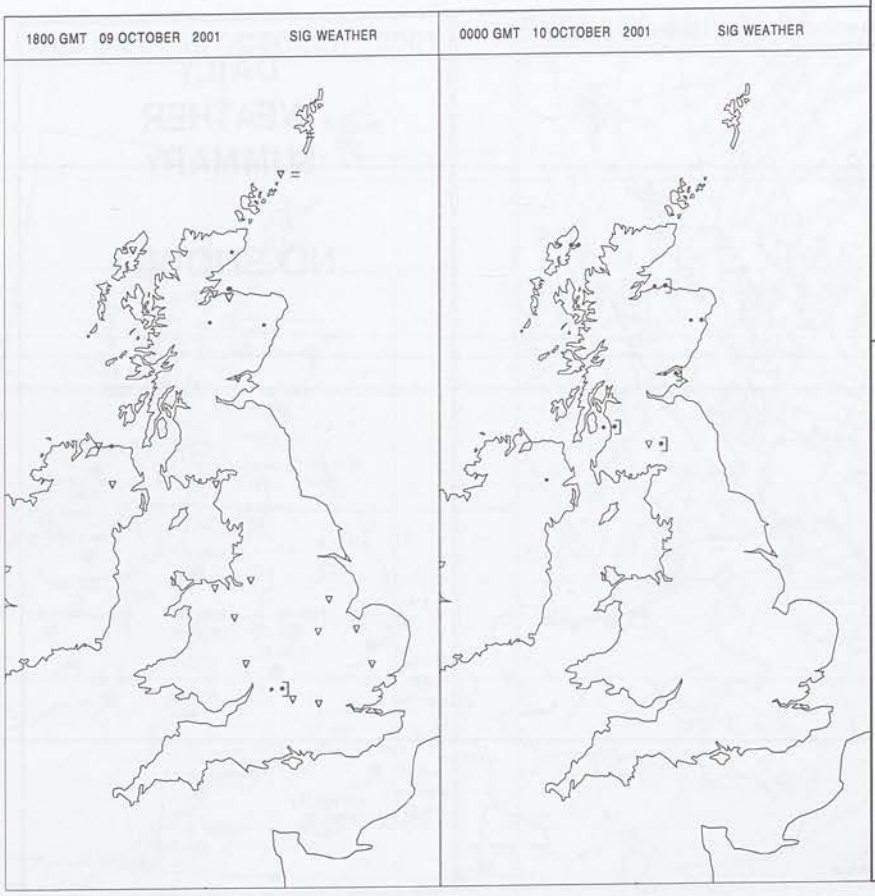
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 09 October 2001.

There were heavy, and at times thundery showers across Sussex and Kent throughout the night and outbreaks of heavy rain over northern England and north Wales at first. The latter gradually became lighter and more patchy as it edged south and east into the Midlands and East Anglia by the end of the night. Patchy rain also affected Northern Ireland and the northeast corner of Scotland through the night.

During the day outbreaks of rain continued to affect parts of northern Scotland and some showers developed across central and southern England but many other areas became largely dry. There was a good deal of sunshine along the south coast. It was another breezy day in northern areas.

By the evening some further rain had reached Northern Ireland and western Scotland and, as this became heavy in western Scotland, patchy outbreaks pushed eastwards across much of Scotland during the evening. Most of England and Wales was dry though and there were some clear spells developed in southern and eastern areas.

Temperatures were generally close to or a little above normal.

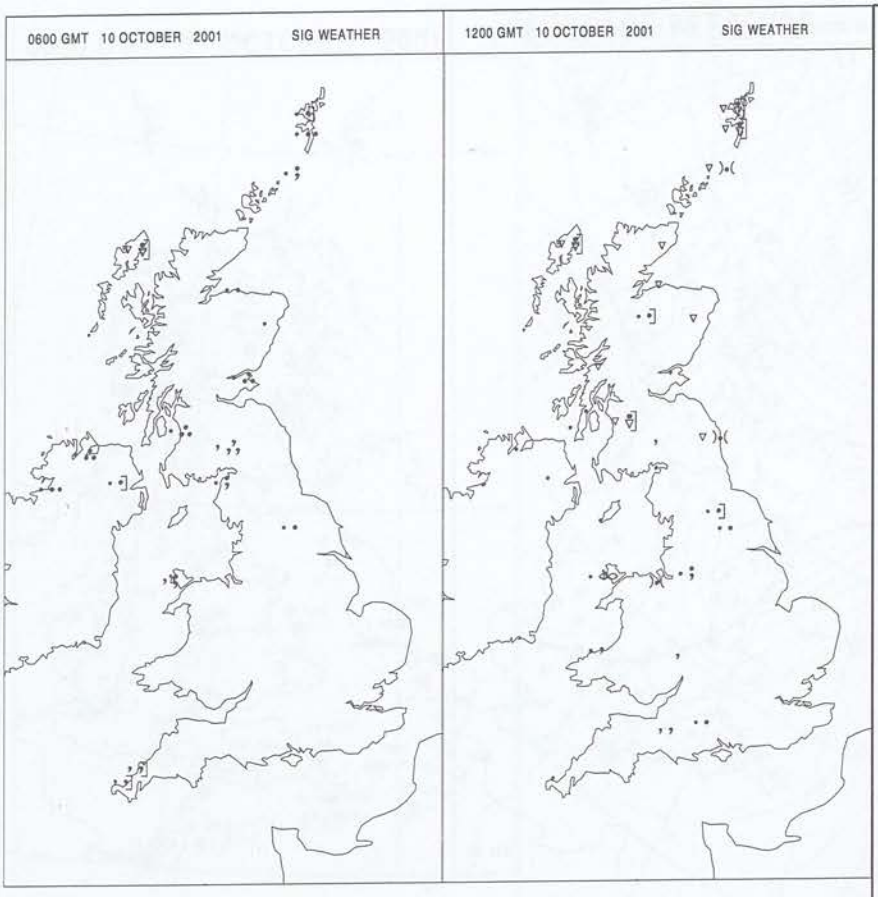
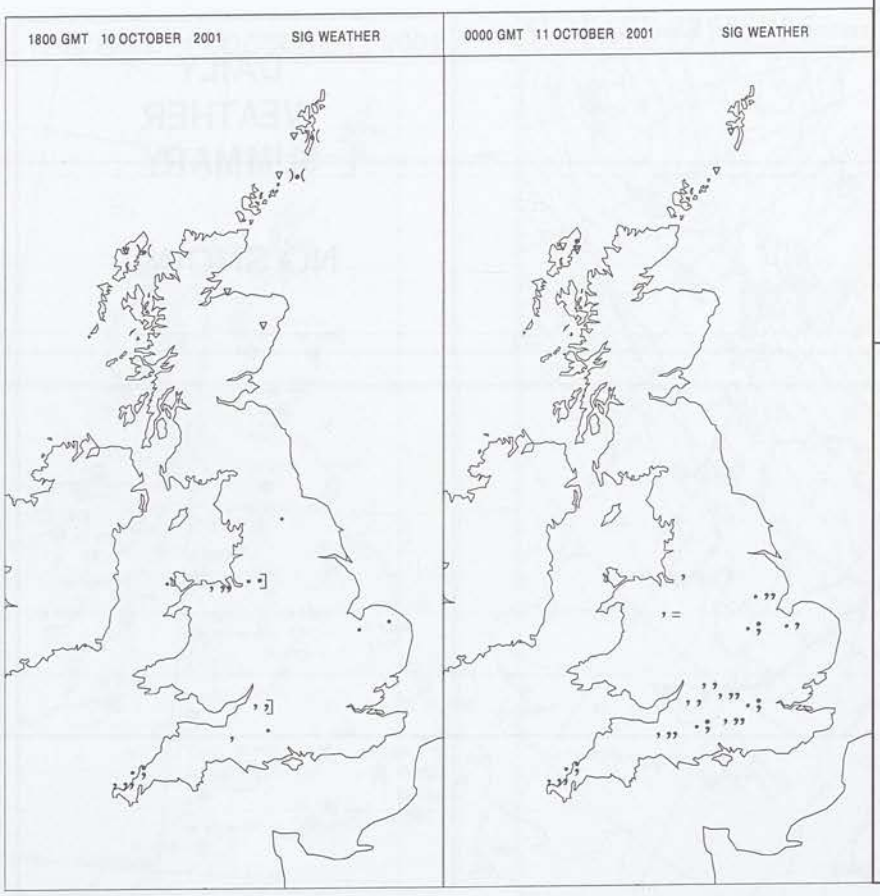
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 10 October 2001.

Overnight, Scotland and Northern Ireland were mostly cloudy with some occasional rain. Much of England and Wales was dry though some patchy rain and drizzle affected western coasts and hills.

During the day the rain in the north slowly spread south into northern England and was rather heavy and persistent over the higher ground near western coasts. In Scotland and Northern Ireland as the rain cleared it became brighter with sunny periods and a few showers. Across more southern, central and eastern England it was essentially a dry if rather cloudy day, the best of the sunshine reserved for coastal counties in the southeast. Some drizzle or light rain blew onto southwestern coasts at times.

During the evening patchy rain lingered in northern England whilst a further pulse of rain pushed from the Atlantic into western Scotland.

It was a rather breezy day generally with fresh southwest winds. Temperatures ranged from near normal in Scotland, Northern Ireland western Wales and southwest England. Remaining areas were rather warm.

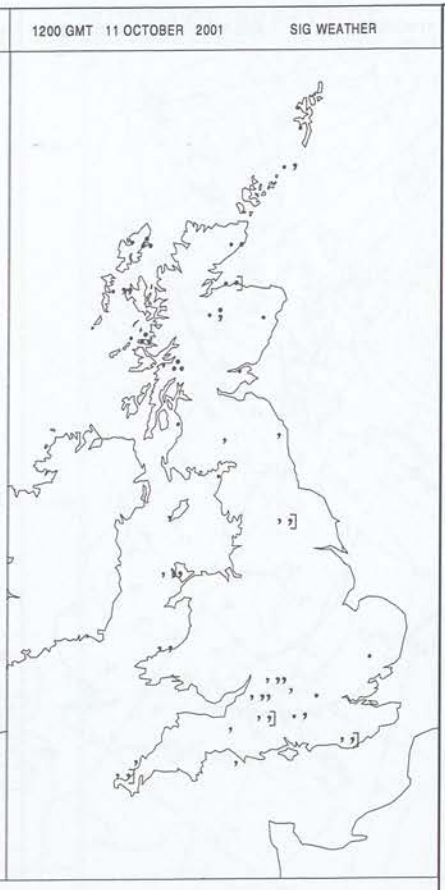
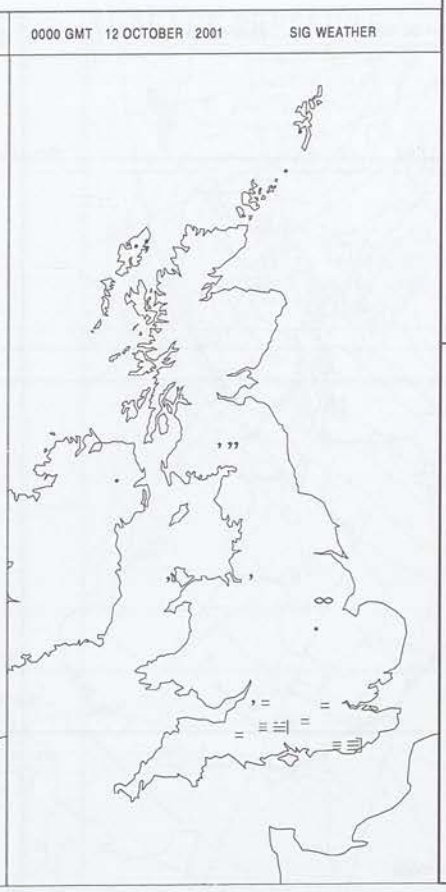
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 11 October 2001.

The night was cloudy across much of the country with patchy rain or drizzle in the south, but with heavier rain over northern Britain, particularly the northwest. Over east Wales, and parts of eastern England, there were some clear spells.

During the day, northern and western Scotland had a mostly cloudy day with outbreaks of rain, heavy at times, particularly in the northwest, where gales occurred in the evening with gusts over 50 knots. Northern Ireland, and Scotland away from the north and west, were mainly dry with variable amounts of cloud and bright or sunny spells. Much of south and west Wales, including Anglesey, had an overcast day with outbreaks of drizzle. Northwest England was dull and damp during the morning, but the afternoon was fairly sunny. Southern England had an overcast day with some morning drizzle. Southwest England became sunny during the afternoon as East Anglia and parts of the Midland became rather cloudy. The rest of England had a mostly sunny day.

It was rather warm or warm nearly everywhere.

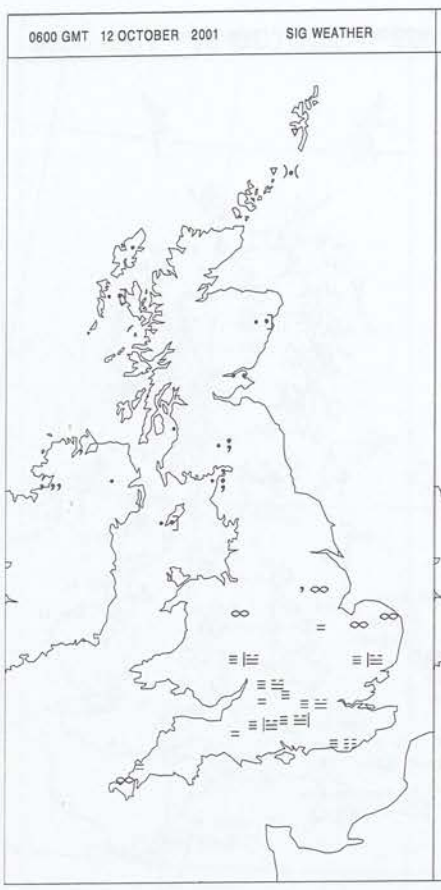
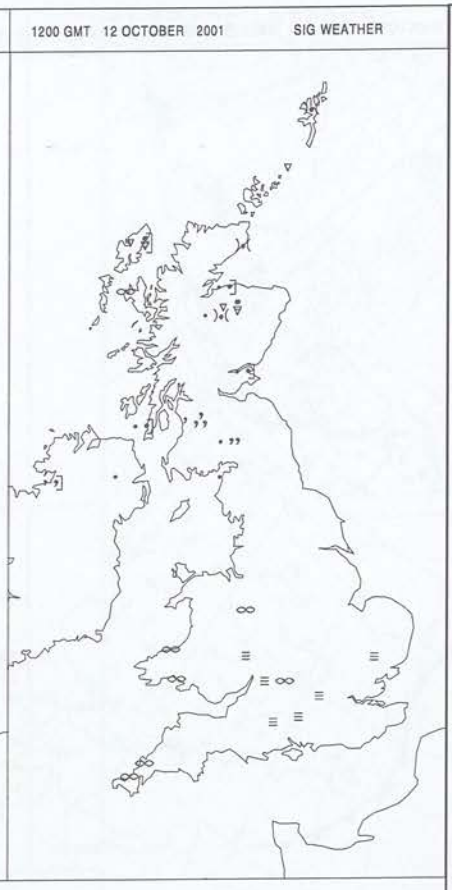
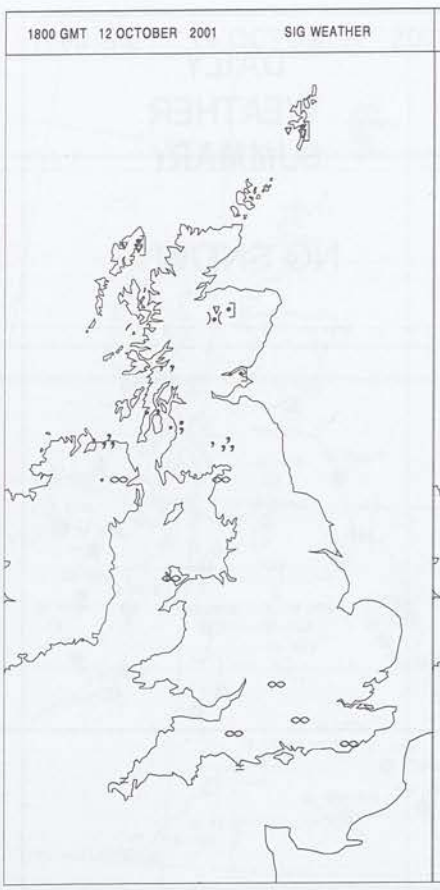
SIGNIFICANT WEATHER







Summary of UK Weather for Friday 12 October 2001.

Scotland, Northern Ireland and northwest England had a mostly cloudy night with outbreaks of rain and drizzle. However, there were some clear spells, especially over eastern Scotland where amounts of rain were small. England and Wales had a dry night with variable amounts of cloud and clear spells. Patchy fog affected southern England, East Anglia and the south Midlands.

During the day, much of southern Scotland stayed cloudy with further outbreaks of rain and drizzle. The rest of Scotland had variable amounts of cloud and bright or sunny spells with scattered showers, these mainly in the west. Northern Ireland had a mostly cloudy day with outbreaks of mainly light rain. England and Wales had plenty of sunshine with fog in the south largely lifting and dispersing by mid morning. The far north of England was rather more cloudy with some early rain, and high cloud spread to much of Wales and southern England during the evening.

It was warm or very warm over England and Wales, and rather warm or warm across Scotland and Northern Ireland.

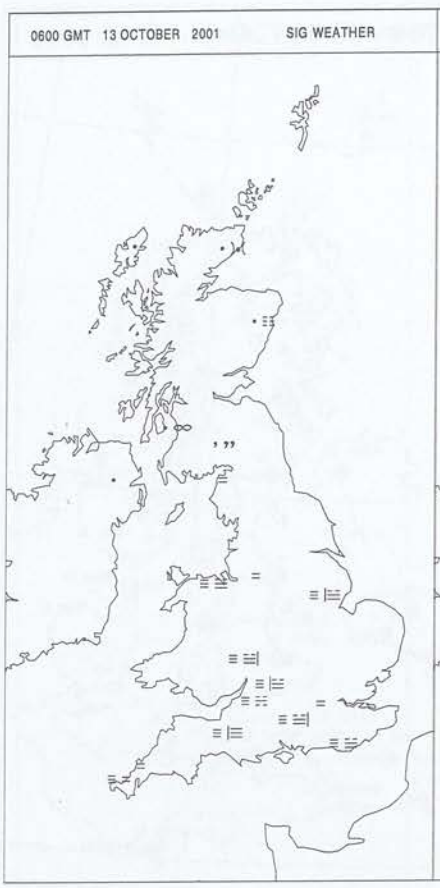
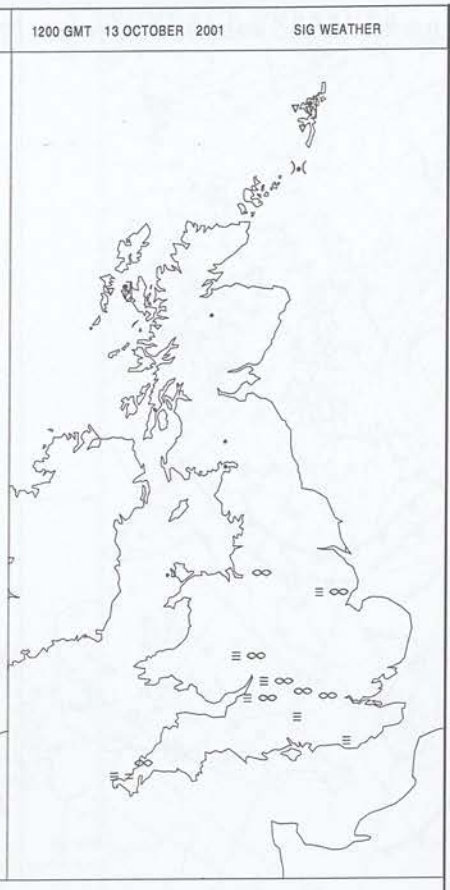
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 13 October 2001.

Initially a weather front lay across Northern Ireland and Scotland, producing some patchy rain and drizzle. Through the night that front drifted southwards across northern England and eventually north Wales with more broken cloud and just the odd shower following across Scotland and northern Ireland. For the rest of England and Wales it was a dry night with clear spells but it became quite murky in places with some dense fog patches forming.

During the day the weather front remained slow moving across Wales and northern England, edging across the north Midlands for a time. It consisted mainly of a band of cloud but there were some sporadic outbreaks of rain. For the rest of England, once the overnight mist and fog had cleared it was a dry bright day with sunny spells, particularly in the southeast. To the north, across Scotland and Northern Ireland it was a bright day with sunny spells. A few showers affected the Western Isles.

It was warm across the whole country but very warm across the southern half of England and Wales, and locally exceptionally warm in the southeast.

EXTREMES

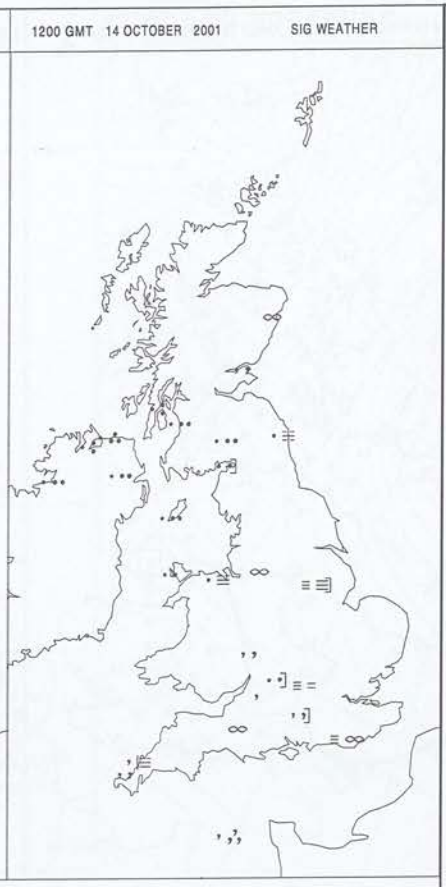
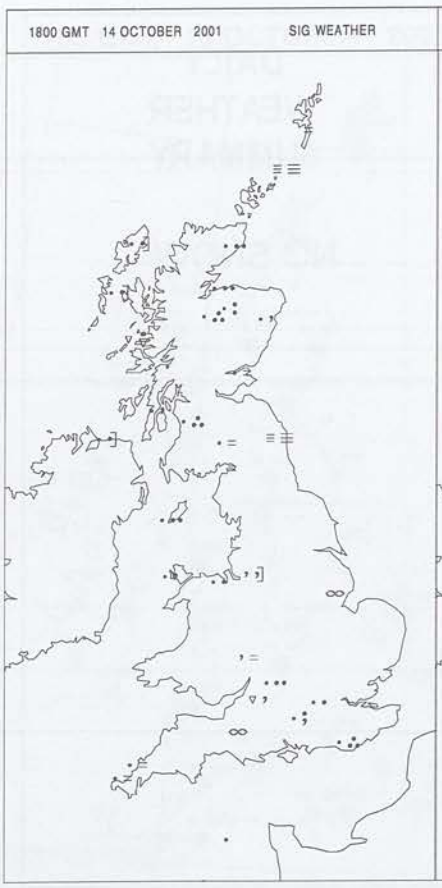
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 14 October 2001.

Scotland and Northern Ireland had a dry night with mostly cloudy skies, although there were some clear spells especially towards northwest Scotland. The night started dry across England and Wales with haze, mist and fog patches. Occasional light rain and drizzle was observed over the higher ground of Wales and northern England later.

Outbreaks of rain developed across northern England, the Isle of Man, southern Scotland and Northern Ireland during the morning, with drizzle reported across southwest England and Wales. After a bright morning for central and northern Scotland, the rain moved north to arrive during the afternoon and evening hours. There were some bright or sunny interludes in northwest, central and southeast England, but isolated showers with patchy rain and drizzle became more widespread during the day. The mist and fog patches lingered across the coasts of eastern England and over the high ground of northern England.

It was a rather warm day in Scotland and Northern Ireland but warm or very warm in places across England and Wales, away from the misty coasts of eastern England.

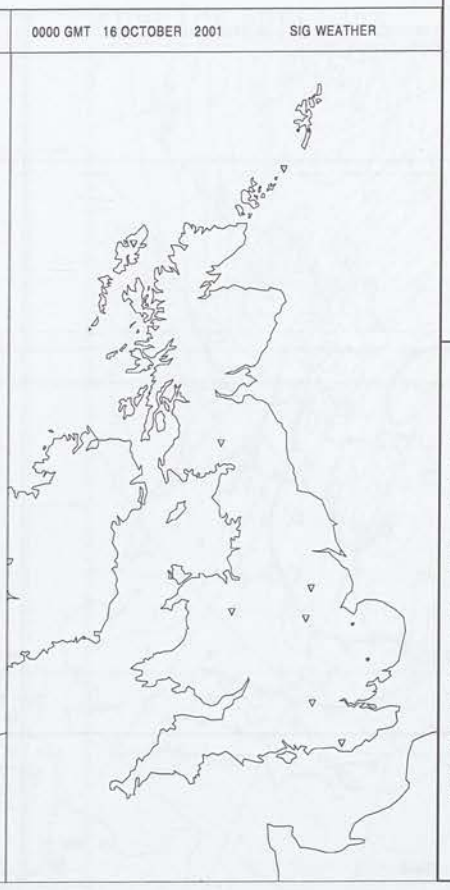
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 15 October 2001.

Most parts had a cloudy night with outbreaks of rain. The rain was heavy in places, chiefly across northern Scotland but also across southeast England late in the night.

Rain affected southeast England and East Anglia for a time in the morning before clearing away eastwards. Another band of rain, heavy and thundery in places, pushed across Wales and southwest England during the morning and then across the rest of England during the course of the afternoon. The rain eventually cleared the east coast in the evening. Drier and brighter conditions followed on behind.

For Scotland, rain in the northeast cleared fairly quickly in the morning. Further rain, heavy in a number of places, pushed eastwards during the day. More broken cloud followed the rain, although showers affected westernmost parts late in the day.

Northern Ireland also saw rain during the morning. The afternoon was drier and brighter although a few showers did develop.

It was rather warm in the west, and warm elsewhere.

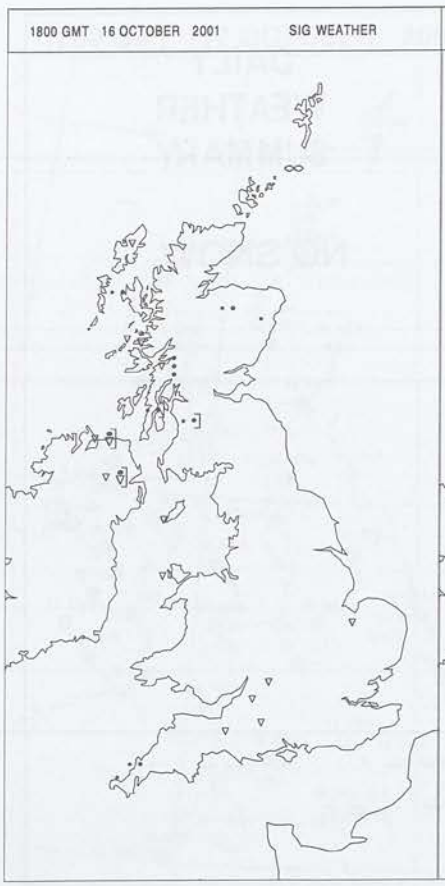
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 16 October 2001.

Much of the country was dry overnight with good clear spells, although high cloud did spread across southern parts towards the end of the night. In the far west, though, there were a scattering of showers, across Northern Ireland in particular.

England and Wales were predominantly dry and bright through the day with spells of sunshine, especially in the east. However, there were a few scattered showers, mainly across southwest England and Wales and into the West Midlands.

For Northern Ireland and much of Scotland there was a fair amount of cloud through the day, coupled with showers. Some of these were heavy with thunder at times. Accompanying the showers were strong and gusty winds. More eastern parts of Scotland had fewer and lighter showers with some reasonable breaks in the cloud.

During the evening scattered, light showers continued over southwest England and Wales but most parts were dry with variable cloud. There were further showers for Northern Ireland and Scotland, especially the far northwest where they were still heavy at times.

Temperatures ranged from near normal in the showery northwest to rather warm elsewhere.

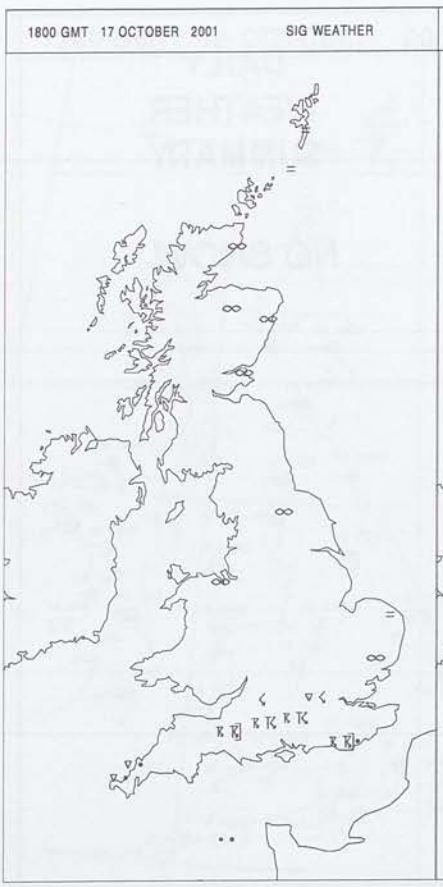
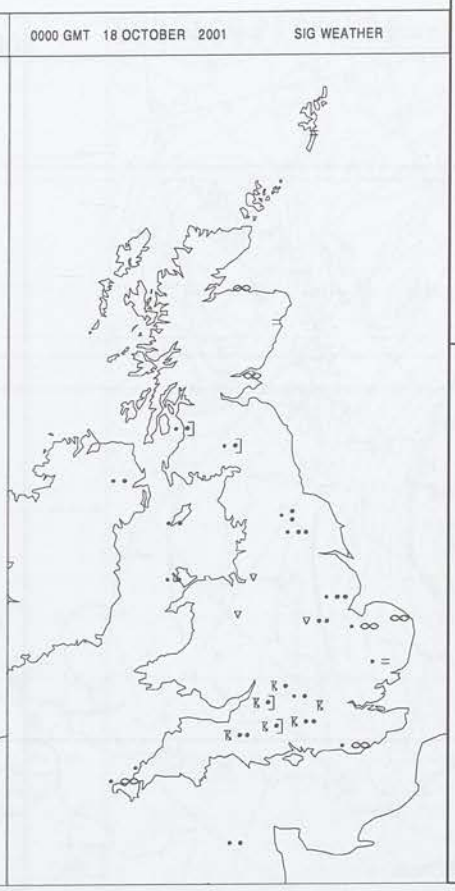
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 17 October 2001.

Scotland and Northern Ireland were rather cloudy overnight with scattered showers in the west and strong winds. England and Wales were largely dry with variable cloud and a few fog patches by morning. However, some of the cloud was thick enough for a little light rain, chiefly over central southern England and into the Midlands towards morning.

During the morning Scotland and Northern Ireland became largely dry with bright or sunny breaks developing. It remained dry through the afternoon with further bright spells, although cloud did increase from the south and west. It was windy generally but with the strongest winds, gusting to severe gale, across Northern Ireland.

For England and Wales the overnight mistiness readily cleared to leave most parts bright with some hazy sunshine. However, during the afternoon showers started to break out in the southwest, with a few rumbles of thunder, extending northeastwards towards evening.

The showers continued northeastwards during the evening with further thundery bursts across the Midlands and southwest England and Wales. Showers also reached Northern Ireland and parts of southern Scotland through the evening.

Temperatures ranged from a little above normal in the far north to warm in many parts of the south.

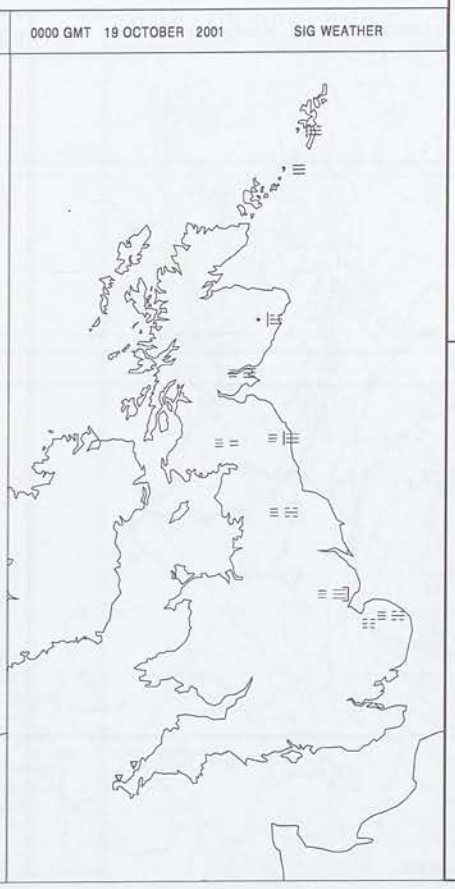
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 18 October 2001.

The night started cloudy over much of the country with outbreaks of rain. Some of the rain was heavy, with isolated thunderstorms over southern England. Northern Scotland had some clear spells at first, with northernmost parts and the northern isles staying largely dry until morning but with increasing cloud. Sea mist and fog affected the coasts of northeast England and Eastern Scotland. Central southern and southwest England, along with much of Wales and Northern Ireland, became dry with clear spells as the rain area moved erratically northeastwards.

During the day, Wales and Northern Ireland had variable amounts of cloud and sunny periods. Isolated showers occurred in the afternoon and evening. Eastern and northern England had some rain for a while in the morning, but this moved away with most parts then dry with sunny spells. Isolated showers affected the southwest later, and sea mist was loathe to clear from the northeast. Rain slowly cleared northeastwards over Scotland with some sunshine towards the west. The east stayed dull and misty.

It was generally rather warm or warm.

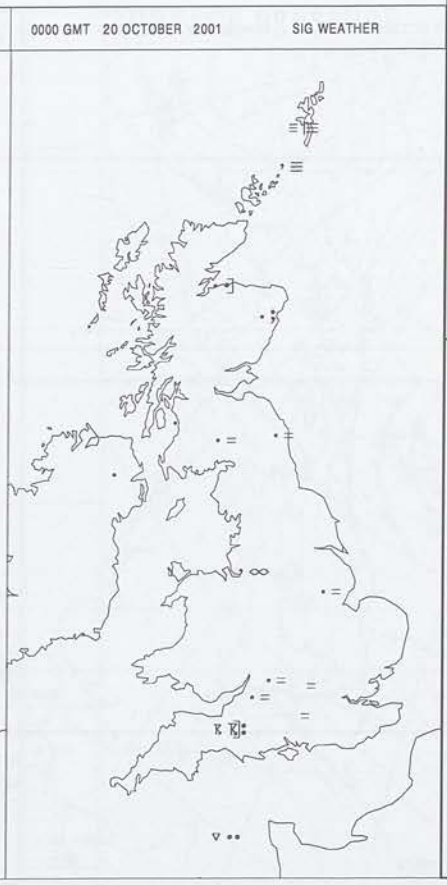
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 19 October 2001.

A cloudy night across the Northern Isles with outbreaks of rain and drizzle. Showery rain, some of it thundery, also moved across the West Country and into south Wales later in the night. Elsewhere it was mostly dry with clear spells but mist, fog and low cloud developed across many eastern parts.

During the morning the rain in the southwest extended northwards across the rest of Wales and slowly eastwards into central southern England. It continued northwards during the afternoon, reaching Northern Ireland later in the afternoon and southern Scotland by early evening.

Eastward progress was more limited with just the odd shower extending as far as southeast England and East Anglia. Ahead, and in the wake of the rain there was generally a good deal of cloud but northwest Scotland had long sunny periods. Further, heavy and thundery rain moved into southern England, the West Country and south Wales later in the evening.

Temperatures were close to normal or rather warm for the time of year across much of the country but in the sunshine in the northwest it was warm and locally very warm.

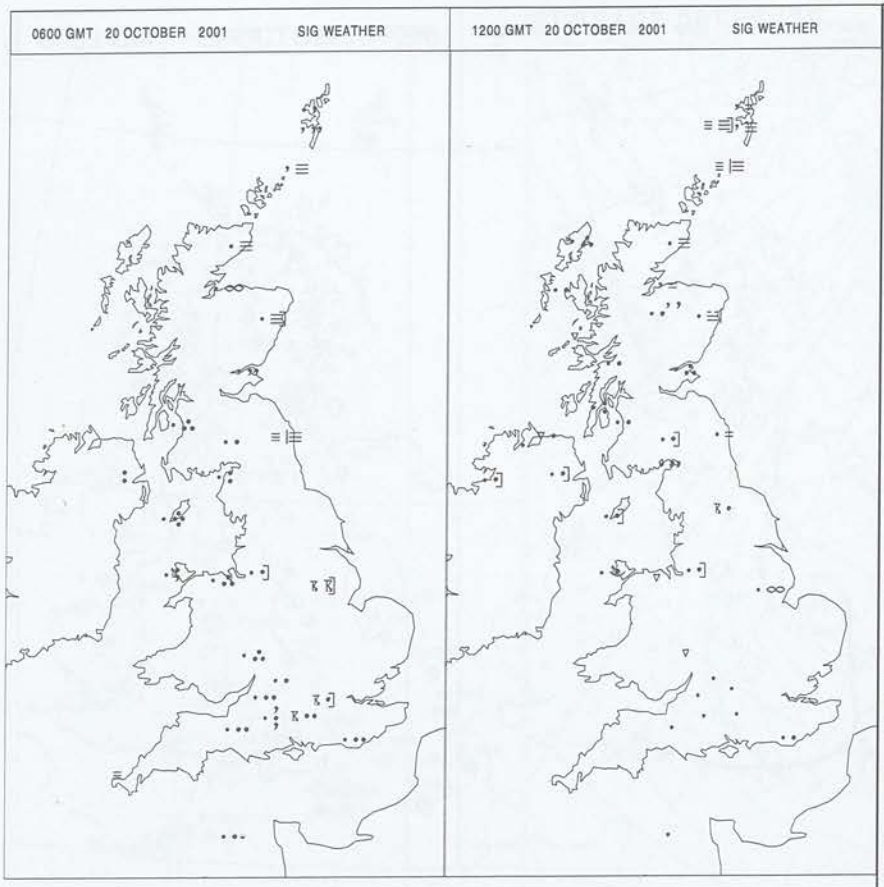
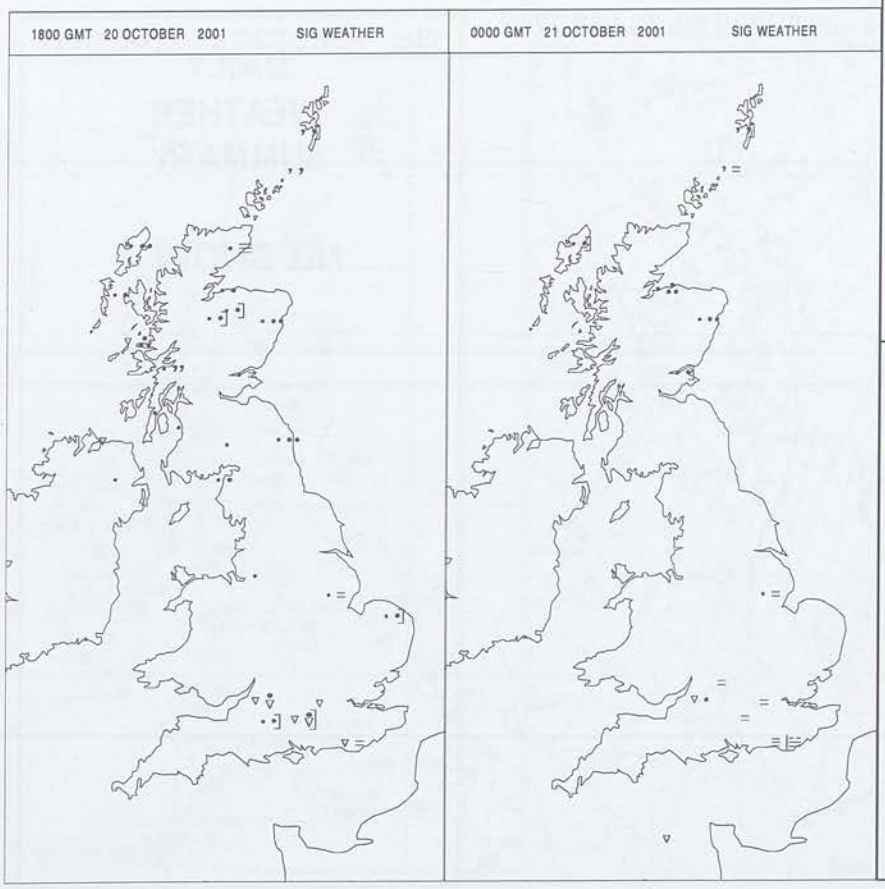
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 20 October 2001.

There was rain across southern counties of England and south Wales at first, and that rain spread quickly north and west through the night. The rain was very heavy in places, particularly across the Welsh marches, with thunder mixed in. By the end of the night the rains northern limit was across Northern Ireland and beyond the Central belt of Scotland. At the same time the rain had become more fragmented across England and Wales with clearer skies spreading across the West Country.

Through the morning the rain continued to make progress northwards across the rest of Scotland with the rain gradually became confined to northern and eastern Scotland and more eastern fringes of England through the afternoon. There was a scattering of showers elsewhere but most places became dry with skies brightening from the southwest. Good sunny spells developed across Wales and the West Country.

The rain continued to clear northwards through the evening becoming confined to northern and eastern Scotland. Fog patches began to develop in clearer spots.

It was rather warm across the bulk of the country.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 21 October 2001.

In the early hours rain affected northern and eastern parts of Scotland, otherwise it was a mainly dry start to the night, mist and fog forming under clearer skies. Fog quite widespread across Northern Ireland. During the night a band of heavy rain moved in across eastern counties of England. During the day this band of heavy rain remained slow moving, pivoting through Kent, and with pulses edging north across much of Scotland, and west across the Midlands and into northwest England. Rain was particularly heavy through Kent and Essex up into Cambridgeshire and the East Midlands, causing flooding problems and with Cambridge Guildhall CDL reporting 90.4mm from 0400-2100hrs. For Wales, Northern Ireland and southwestern parts of England it was a mainly dry day with some sunshine, although fog lingered in parts of Northern Ireland almost all day. After dark the rain became confined mainly to Northern England/ Scotland, edging into the Province, but with a thin line of rain still affecting parts of Central England. Daytime temperatures ranged from rather warm in the sunnier spots to cold in the rain areas.

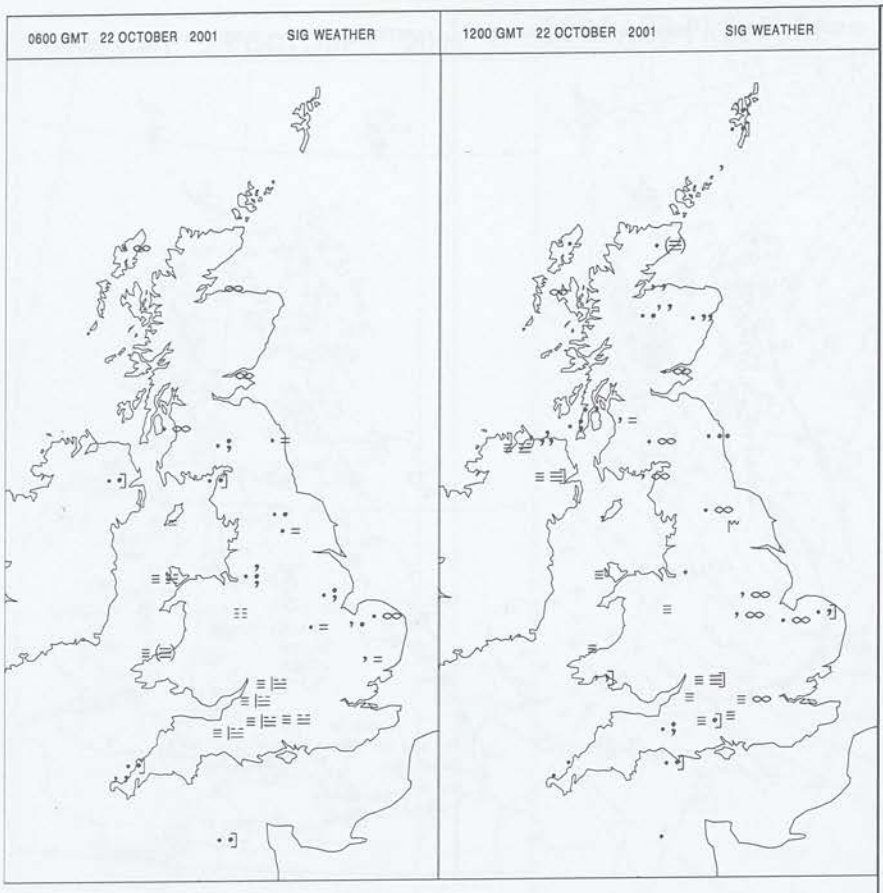
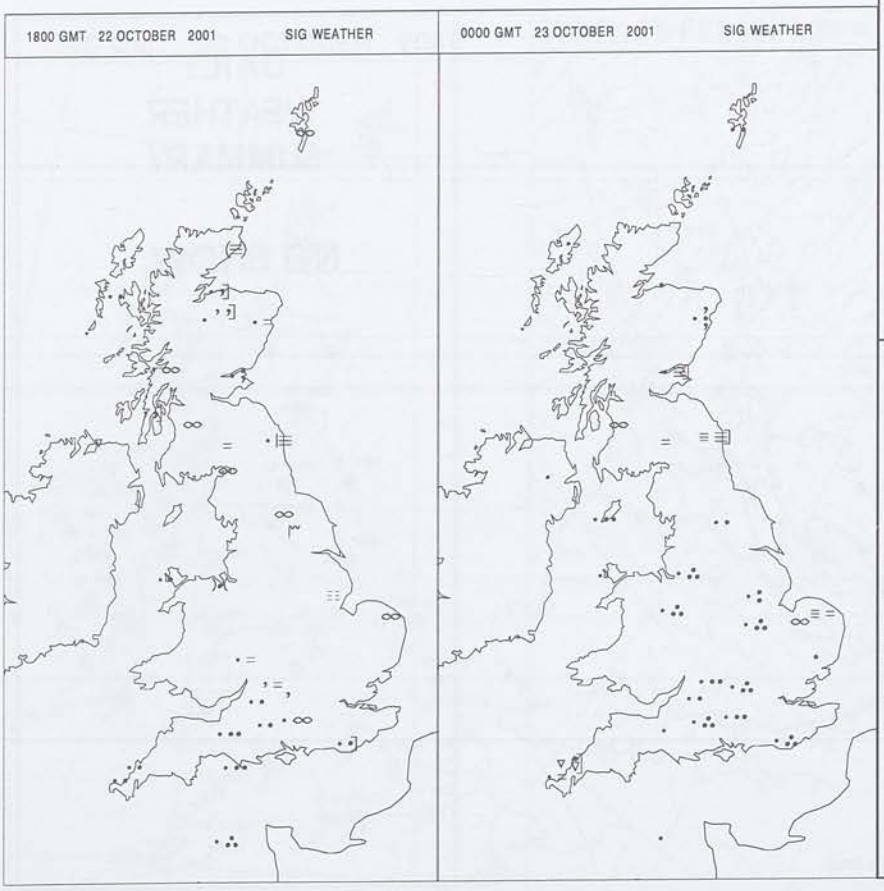
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 22 October 2001.

Northern and eastern England, together with southern and western Scotland had a cloudy night with outbreaks of rain. Elsewhere, it was largely dry. Clear spells developed in the south and west and here fog formed late in the night.

The cloud persisted through the morning across many northern and eastern parts of England with some chiefly light rain and drizzle in places. The afternoon though was generally brighter and mostly dry. Wales, southern England and the Midlands, once the early fog and cloud had cleared, saw some sunshine for a time. However, later in the day rain edged into southwest England and south Wales and then across the rest of Wales and also southern England and the Midlands during the evening. The rain was heavy at times.

Much of Scotland had an overcast day with some drizzly rain in places. The fog that had formed overnight across Northern Ireland was slow to clear during the morning. Much of the province had a brighter afternoon before showery rain arrived in the evening.

The temperatures were close to normal across Scotland, but mostly a little above normal elsewhere.

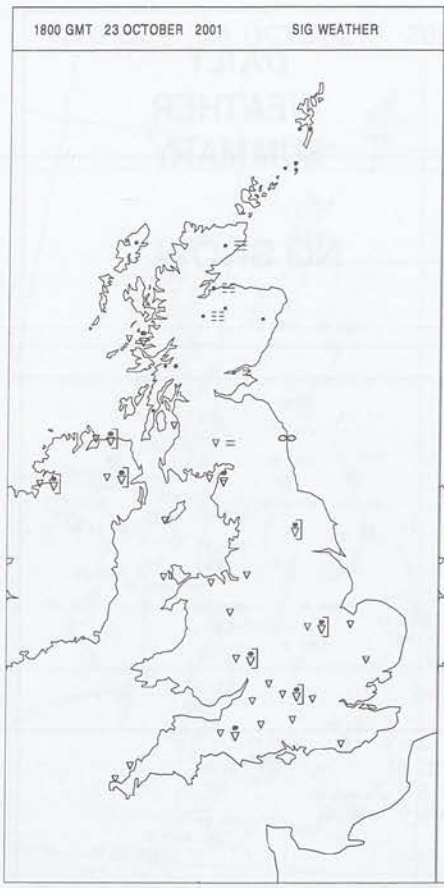
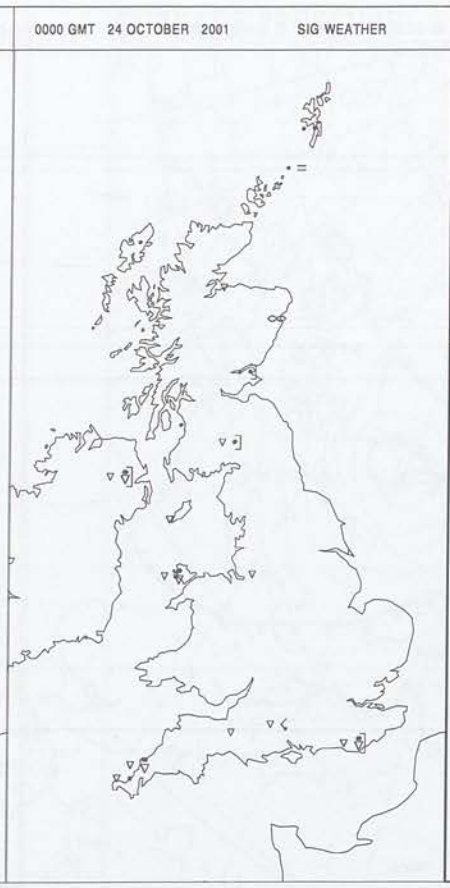
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 23 October 2001.

A band of rain, heavy in places, stretching from southwest Scotland, through northern England, the Midlands, East Anglia and southeast England edged northeastwards during the night, clearing all but northern and eastern Scotland by morning. Showers, some of which were heavy, followed on into western areas.

Rain continued to affect northern and eastern Scotland during the morning and early afternoon. Southern and western parts Scotland were largely dry initially but heavy showers spread from the southwest during the course of the afternoon.

Northern Ireland also had a showery day but with some brighter spells.

Showers across western parts of England and Wales extended further east during the day. The showers were always more frequent and heavier in the west. Some of the showers were thundery. The showers across the more eastern counties were generally well scattered with a number of places remaining dry. Between the showers there were sunny spells.

It was generally rather warm, locally warm.

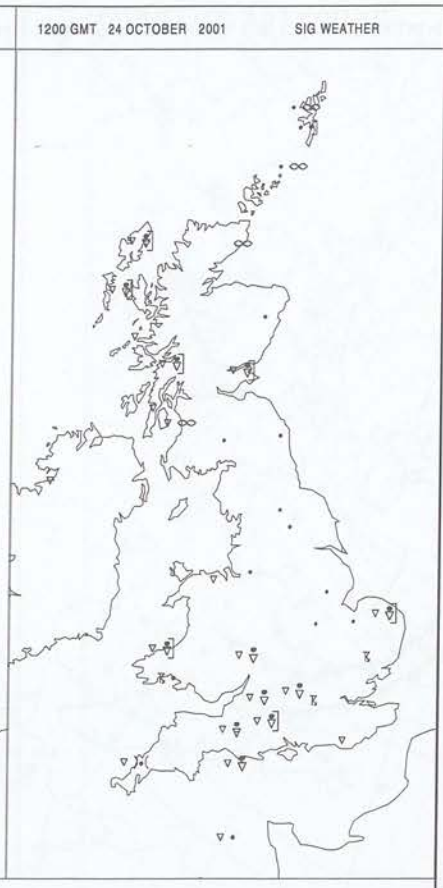
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 24 October 2001.

Overnight there were showery outbreaks of rain across parts of Scotland, and there was a band of rain, heavy at times, across the southwest of both England and Wales. This latter feature edged north over the rest of Wales and into Northern Ireland, and east reaching a line from London to Yorkshire by about dawn. Scattered showers followed across southwestern parts.

During the morning the (locally thundery) rain over England continued to move away to the east, clearing the east coast by midday. The showers across southwestern parts drifted east and there were further showery outbreaks over Scotland, especially the south and west. By midday there were frequent showers across southern parts of the UK, occasionally heavy, but further north the precipitation was lighter and more patchy and there was some sunshine at times. During the afternoon the heaviest of the showers in the south cleared away to the east, leaving many places dry by the evening but with scattered showers here and there.

Temperatures were generally in the rather warm or warm categories.

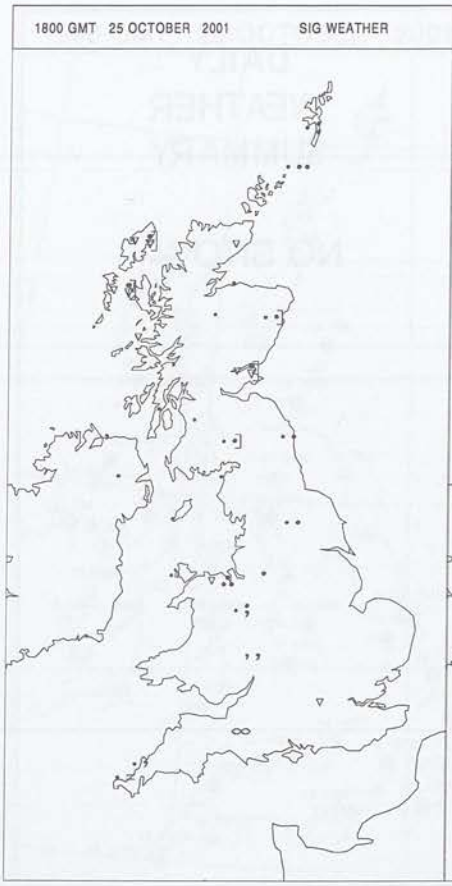
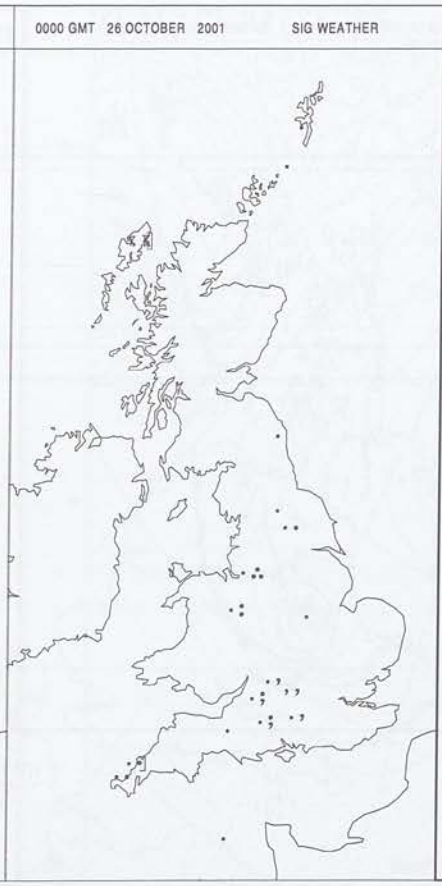
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 25 October 2001.

England and Wales were largely dry with clear spells overnight. Towards morning, though, cloud increased from the west. Eastern Scotland started largely clear but cloud across Northern Ireland and western parts soon spread over. This cloud was thick enough for showery bursts of rain in the west, accompanied by strong, gusty winds.

During the morning the rain in western Scotland moved northeastwards, clearing the Northern Isles by midday. Meanwhile a band of rain, heavy at times and with gusty winds, pushed across Northern Ireland and into western Scotland. This spread eastwards through the afternoon, reaching the rest of Scotland, Wales and northwest England. More broken cloud and showers followed across Northern Ireland. By evening the rain had cleared eastern Scotland, with cloud breaking here, leaving the rain across Wales and much of northern England. To the southeast, cloud was thinner and more broken with most of central and southeastern England dry and bright.

Northern Ireland and Scotland had clear spells during the evening with showers in the west. Southern and eastern parts of England remained dry, but with increasing cloud. Wales and the remainder of England were cloudy with rain, heavy at times.

Temperatures were generally rather warm or warm.

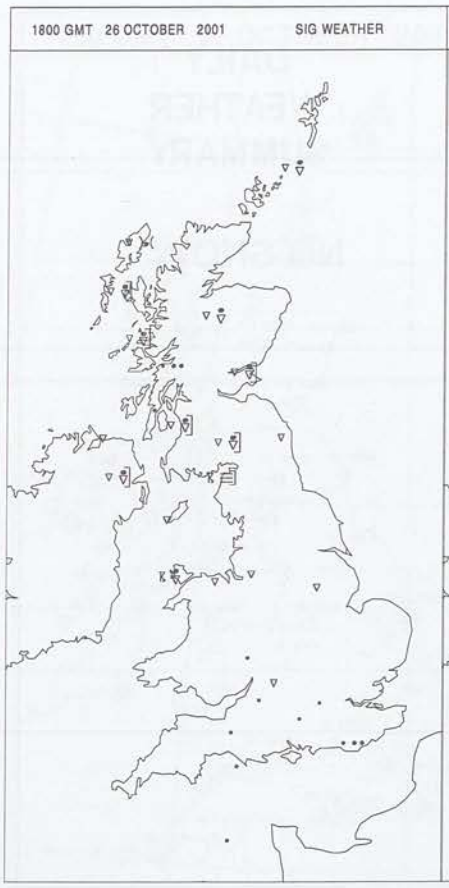
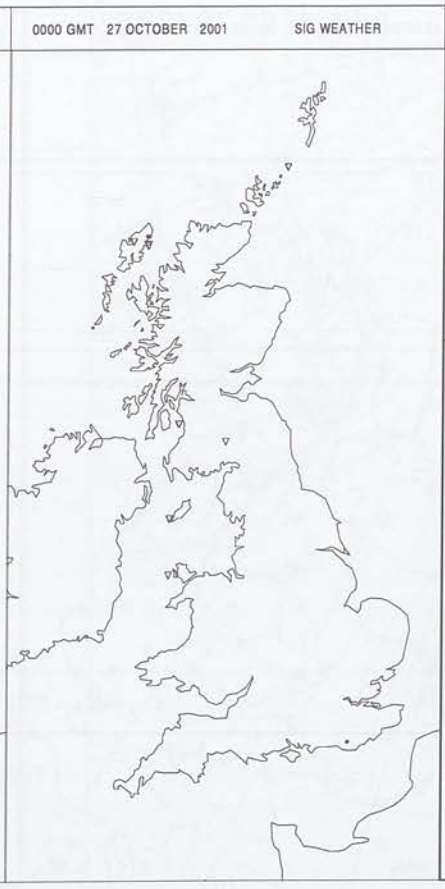
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 26 October 2001.

Northern Ireland had a dry night with clear spells as did most of Scotland. It was windy with showers in the Western Isles, and there was thunder offshore at first. Parts of Wales and northern England stayed dry but rain spread to south Wales, southwest England and the Midlands overnight. Much of southeast England stayed dry. There were some showers over Northern Ireland especially in the afternoon with some thunder. Showers continued over western Scotland and developed across the south too, where a few turned thundery, but in the east and across the Northern Isles it was mainly sunny. Stornoway reported a gust of 53 knots at 1000.

The rain band over England and Wales moved southeast but did not reach the extreme southeast until late in the day. Showers followed into western parts in the afternoon and evening with thunder reported from north Wales and Cumbria.

The rain cleared the southeast in the early evening. A few showers continued around western coasts and more especially over western Scotland and parts of Northern Ireland.

It was generally rather warm or warm.

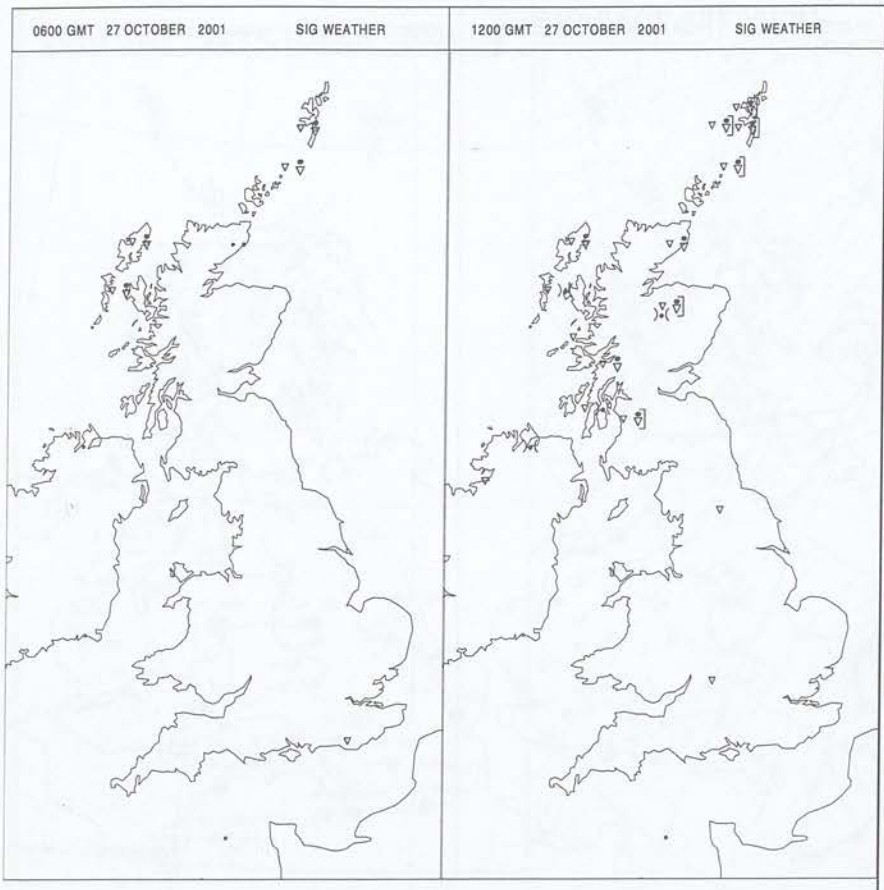
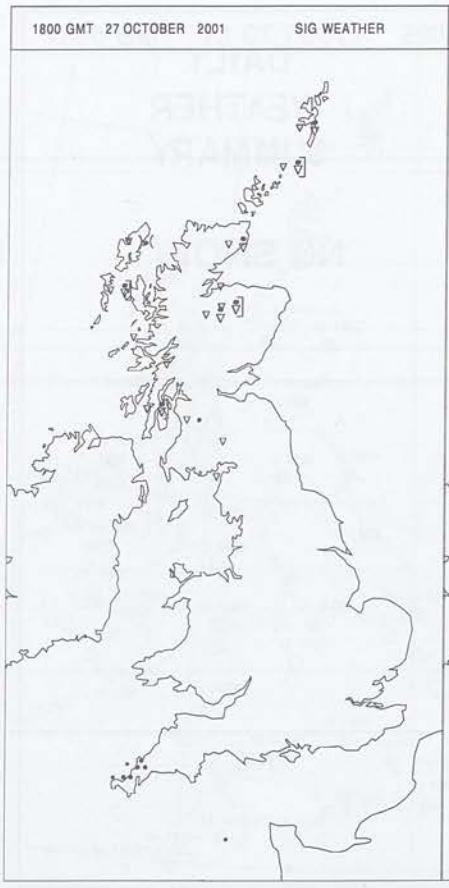
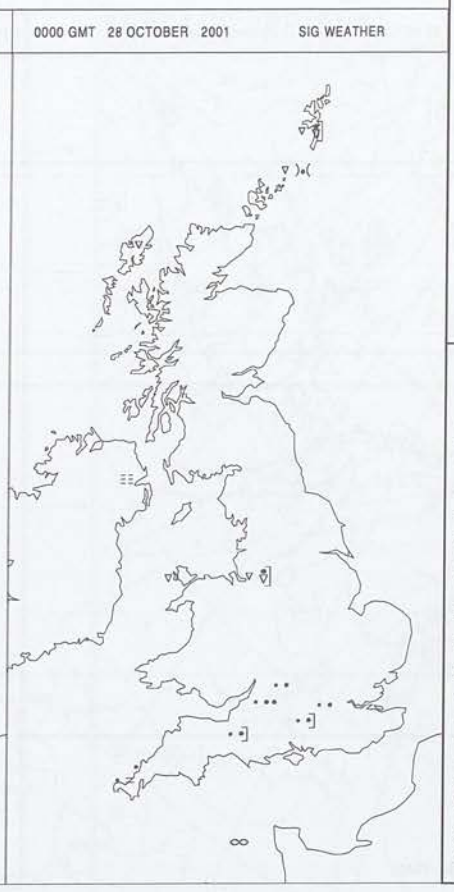
SIGNIFICANT WEATHER







Summary of UK Weather for Saturday 27 October 2001.

There was a scattering of showers over Northern Ireland overnight and some showers over western and northern parts of Scotland, as well as the Central Lowlands. Most of England and Wales stayed dry with variable amounts of cloud.

Northern Ireland had a fair amount of sunshine but there were also a few showers through the day. There were some showers over the north and west of Scotland where it was also breezy with a strong west then northwest wind. Elsewhere it was dry over Scotland.

There were a few showers across England and Wales, mainly in the west, but many places had a fairly sunny day. Thickening cloud brought rain into the southwest of England and south Wales in the late afternoon and evening, with this rain reaching many other southern counties by late evening.

Apart from that rain across southern parts of the United Kingdom and a few showers over Scotland, it was dry elsewhere through the evening.

Temperatures were close to average over Northern Ireland and western Scotland. Elsewhere it was mostly rather warm.

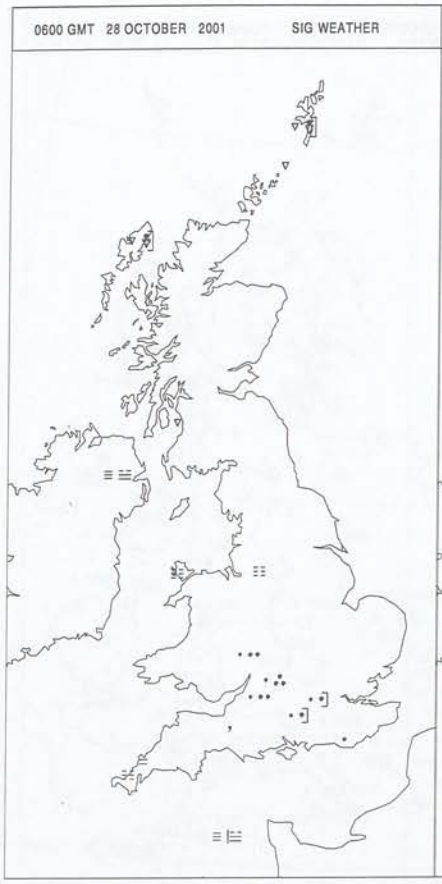
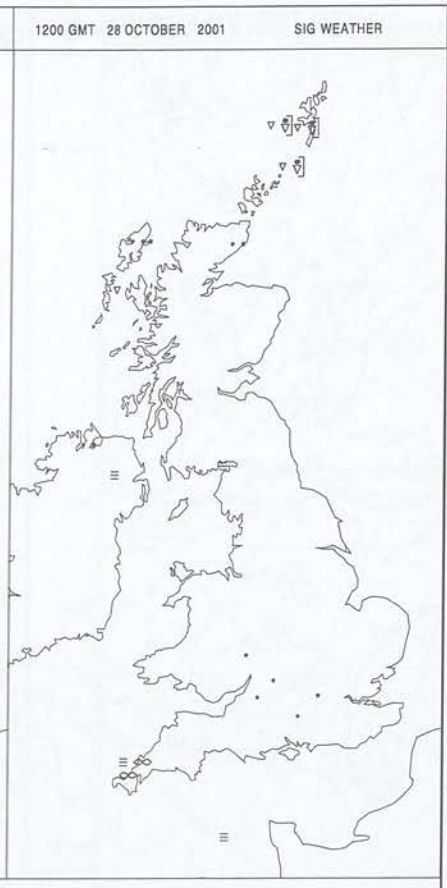
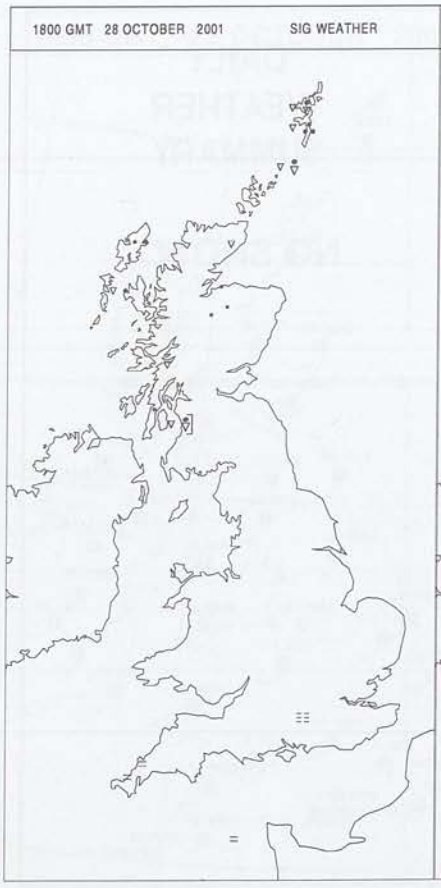
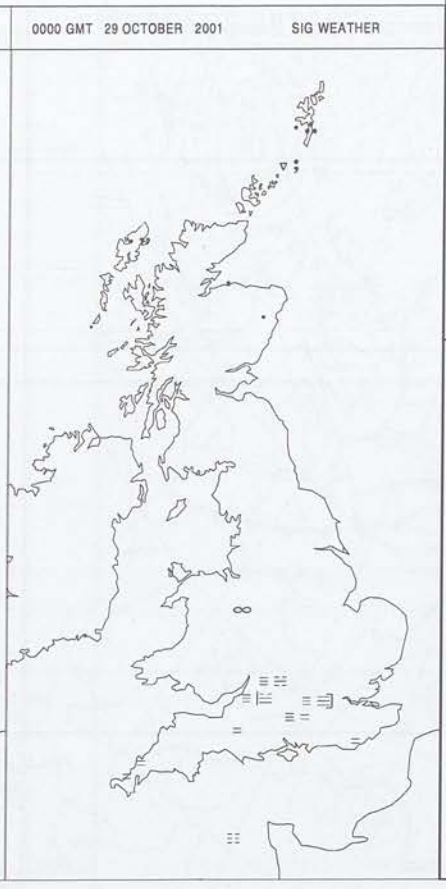
SIGNIFICANT WEATHER









Summary of UK Weather for Sunday 28 October 2001.

Sunday began with showery bursts of rain across northeastern Scotland and the Northern Isles, whilst across southern counties of England and Wales it was cloudy with outbreaks of rain. Remaining parts were dry with clear skies which led to some fog patches and areas of ground frost by morning. The area of rain in the south edged as far north as southern Norfolk before slowly sinking south towards morning.

Showery bursts of rain continued across northern Scotland with scattered showers further south during the morning, and much further to the south the rain finally cleared from southeastern England by late morning.

Many central and northern areas of England and Wales had a fine and quite sunny day once the overnight mist and fog patches cleared, however cloud lingered well into the afternoon in southern coastal counties in particular.

During the evening mist and fog patches became quite thick in some areas of the south, but further to the north it was quite cloudy with still outbreaks of rain across the far north.

Temperatures were above average almost without exception, with some places rather warm.

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 29 October 2001.

Scotland was largely cloudy throughout the early hours with outbreaks of rain with some of these outbreaks occasionally reaching Northern Ireland, whilst others worked their way southeast along the east English coast as far south as Lincolnshire towards morning. Otherwise it was dry across England and Wales with some fog patches in places, which tended to lift into misty low cloud towards morning as the southwest winds picked up.

Rain continued across western Scotland throughout the day, given substantial rainfall totals, but eastern areas of Scotland were bright at times with a little sunshine. After the rain in northeastern parts first thing, most remaining districts of the British Isles were dry through the day with variable, often large amounts of cloud. It was quite windy, especially across the north with regular gusts close to 50 knots and 56 knots being recorded at Aviemore at midday. Values of double this were recorded over the mountain tops, however.

Temperatures were mostly a little above normal or rather warm but were warm along parts of the English Channel coast.

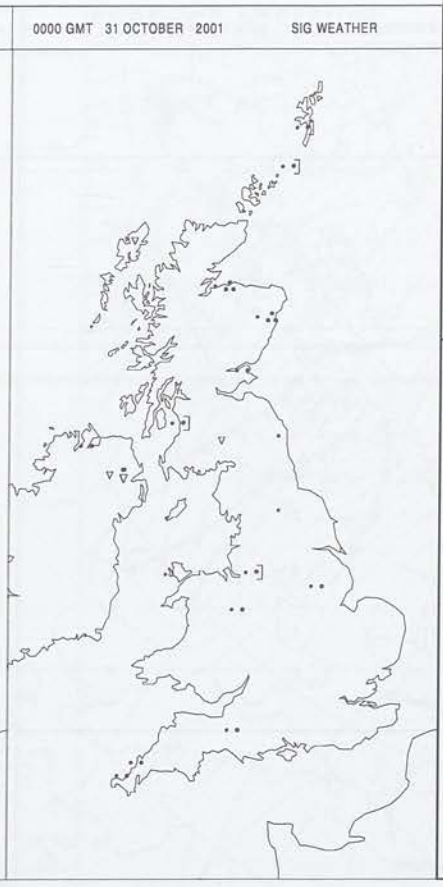
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 30 October 2001.

England and Wales had a dry night with small amounts of cloud. In Northern Ireland it was dry but mostly cloudy. In Scotland it was cloudy and wet, the heaviest and most persistent rain falling in the west and northwest of the country.

During the day this band of rain expanded south with rain into Northern Ireland by late morning and across northern England by mid afternoon. However the rain lingered in Scotland. The rest of England and Wales was dry, and in most places sunny, though cloud did increase in the north and west. A few showers broke out over Wales and then, during the evening, a band of quite heavy rain shifted southwards to reach from southwest England, across South Wales to the Humber by midnight. At the same time the more persistent rain in Scotland turned showery with showers also showing up in Northern Ireland.

Strong winds affected all areas, with a gust of 53 Kt at Capel Curig.

Temperatures ranged from near normal in Scotland to warm or very warm in parts of England and Wales.

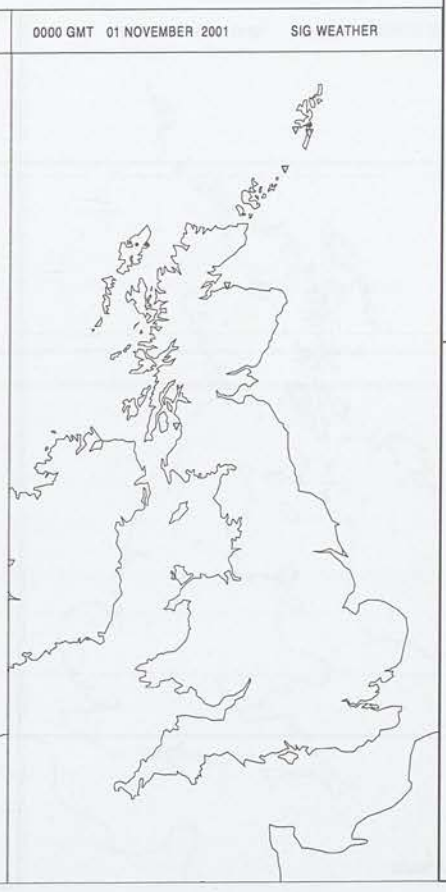
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 31 October 2001.

Scotland and Northern Ireland had scattered showers in the north and west with clear spells elsewhere. A band of cloud and showery rain cleared southeastwards across the southern half of England during the night, with a further band of showers stretching from south Wales across the Midlands to eastern England by morning.

During the morning most of the showers over England and Wales quickly died out. Many parts then had a fine, dry day with good spells of sunshine. There was a strong wind, though, and this did feed a few showers into north Wales, northwest England and on into the Midlands.

Northern and western parts of Scotland and Northern Ireland continued to be plagued by showers through the day, although these did become lighter and more scattered with time. Otherwise, it was bright with good spells of sunshine, but rather windy here as well.

Scattered showers continued over western Scotland during the evening, with medium and high level cloud spilling across Northern Ireland and Scotland. England and Wales were largely dry with clear periods.

Temperatures were near normal and feeling chilly in the brisk winds.
